Design Aspects

- Incorporated components and structural elements of a pre-engineered metal building, coupled with eclectic detailing and historic design elements.
- This building was designed to reflect the 100 year old Community School.
- Square columns, colonial style windows, panel doors, standing seam metal roof, and lap siding were elements used to simulate the Old School Building.
- Interior spaces took advantage of the high eave height available with a pre-engineered building to create a large meeting space, commercial kitchen, handicapped accessible restrooms and lots of storage.
- Sensitively designed to accommodate community and senior citizens functions.

Design Team

Structural Engineer
Riddle-Newman Engineering, Inc.

Mechanical Engineer
Verrando Engineering

Electrical Engineers
AKEA, Mr. Randy Hensley P.E.

Landscape Architect
Hartwig and Associates, Inc.
